

ALL-IN-ONE KIT FOR RAPID PROTOTYPING AND DEVELOPMENT

All-in-One kit: GD-xD-W515-Eval Board. This evaluation platform leverages various GigaDevice products, enabling customers to evaluate multiple hardware and software combinations all within one comprehensive kit.

The GD-xD-W515-EVAL Board is the first evaluation kit in the xD series, it comprises a mainboard, a fingerprint board, and an LCD board within a compact footprint. It can be powered by either a battery or the Mini-USB interface of the GD-Link programmer. Through the integration of diverse GigaDevice's high performance MCU (GD32W515PIQ6) , SPI NOR flash (GD25Q128E), capacitive fingerprint Sensor (GSL6157), battery management IC (GD30BC2416), and high-performance power IC (GD30LD1002), this EVAL board delivers tailored solutions to customers across a spectrum of applications, such as smart home HMI, smart door lock, and portable device control.
