

CREDIT-CARD-SIZED SMARC MODULE FOR THE NEXT LEVEL OF INDUSTRIAL COMPUTING

STELIAU
TECHNOLOGY

Specially designed for industrial requirements, they deliver eight processor cores –which is double the previous generation – while maintaining the same power consumption. The credit-card-sized conga-SA8 modules therefore set a new performance benchmark for future-facing industrial edge computing and powerful virtualization. With conga-SA8 modules, consolidated edge computing applications in the industrial temperature range of -40°C to +85°C can now also benefit from increased performance and energy efficiency.

Key highlights:

- ✓ With up to 8 cores, the conga-SA8 can host a variety of different applications that previously required multiple dedicated systems
 - ✓ This SMARC module helps to reduce the number of devices and increases reliability, cost-efficiency, and sustainability
 - ✓ High-performance image recognition and graphics processing thanks to Intel graphics with INT8 inference support and up to 32 execution units
- Increase in parallelism and performance
 - AI Acceleration (VNNI)
 - Intel Gen 12 UHD Graphics with up to 32EU's
 - LPDDR5 with up to 4.800 MT/s memory support
 - Extended temperature options available

Congatec

Congatec is a rapidly growing technology company focussing on high-performance embedded computing products, so-called computer-on-modules and industrial single board computer.
