

GIGADEVICE PARTNERS WITH SEGGER TO PROVIDE EMWIN GUI SOFTWARE

GigaDevice and SEGGER announce their collaboration to provide customers with SEGGER emWin embedded system graphics library, free of charge. GigaDevice customers can now use emWin , as well as AppWizard, across all GD32 Cortex®-M series MCUs.

With GD32, the largest Arm®-based MCU product family in China, GigaDevice was first to launch MCUs containing Cortex®-M3, -M4, -M23, -M33, and -M7 cores. With this, GigaDevice achieves comprehensive coverage of mainstream microcontroller applications, from low energy to ultra-high performance, covering consumer to automotive grade whilst adopting the latest architectures, keeping costs low, and offering rapid real-time response. The GD32 family has 46 product series and more than 600 devices, maintaining excellent compatibility throughout.
