

IEC CONNECTOR C19 FOR CABLE MOUNTING WITH V-LOCK

The 4799 rewirable IEC connector is the first of its kind: it combines a rewirable C19 connector with the proven V-Lock cord retention system.

Fast reaction time is an important factor in opening a new market for a device. Rewirable connectors are particularly flexible and especially suitable for small series of mains cables to enable exactly this. These connectors give you the freedom to choose the right cable with a country-specific plug. With electrical appliances that are moved or vibrate during operation, there is a risk of the power cable being unintentionally pulled out of the appliance, resulting in a power failure. Therefore, cord retention systems such as the one on the 4799 are a cost-effective solution to a potentially expensive problem.

Main Features:

- Prevents unintentional removal of Power
- Simple cable assembly
- Reusable
- Halogen free
- Cord Connectors (Rewirable): Screw-on mounting
- Connector, Pin temperature 70 °C, Protection class I
- With V-Lock interlocking system
- Cable
